

## A MAJOR INNOVATION IN TEXTILE PROTECTION AGAINST THE HUMAN CORONAVIRUS AND OTHER PATHOGENS

EPA Reg. # 64881-7-84917  
EPA Est. # 84917-M-1

SiArmor Antimicrobial Surface Protectant is an EPA registered antimicrobial combined with water and a proprietary silicone base with 3 global patents. The patented formulation creates a unique tripod anchor on surfaces for the antimicrobial to attach to creating a covalent bond with surface adhesion 3 times stronger than other antimicrobial products.

In recent certified testing against human coronavirus 229E (the latest US government standard for testing against CoVid-19), it attained 99.43% kill rate in 5 minutes with continued protection for up to 90 days! Additional recent testing yielded a 99.9% kill rate of MRSA, CDIFF, HIV1, influenza and norovirus.

---

### ADDITIONAL INFORMATION:

- ✓ Extremely cost effective.
- ✓ Protects textiles for up to 90 days.
- ✓ Effective laundry additive to create antimicrobial uniforms, linens, towels, blankets, mattresses, bedding and other textiles including leather.
- ✓ Extends the life of textiles by killing bacteria that remain in textiles after laundering.
- ✓ Withstands normal washings and withstands extreme temperatures of commercial pressing machines.
- ✓ Can be added to existing automated laundry dispensing systems if an automated dispensing valve is available.
- ✓ Effective for up to 10 washings before reapplication.
- ✓ Dries transparently in minutes when applied as a spray to textile surfaces.
- ✓ Produces a mechanical kill versus a chemical kill (cannot create superbugs).
- ✓ The standalone automated dispensing systems are available and require no electrical connection to laundry or dispensing systems.
- ✓ 2-year shelf life once container is opened.

---

### Ready to Use & Concentrate quantities available:

---

- 32 oz Bottle: Case Count – 12 with Microfiber mitts
- 1 Gallon Container: Case count – 4
- 5 Gallon Container
- 55 Gallon Drum
- 275 Gallon Tote
